What is claimed is:

1.   An image processing method comprising the steps of:

receiving specification of a first area having a desired color-tone in a displayed image;

receiving specification of a second area in the image or in another image; and

changing a color-tone of a desired area including the second area into the color-tone of the first area.

2.   An image processing apparatus comprising:

display means for image display;

area specification means for specifying a first area having a desired color-tone in an image displayed on the display means and a second area in the image or in another image; and

conversion means for converting a color-tone of a desired area including the second area into the color-tone of the first area.

3.   A computer-readable recording medium storing a program to cause a computer to execute the procedures of:

receiving specification of a first area having a desired color-tone in a displayed image;

receiving specification of a second area in the image or in another image; and

changing a color-tone of a desired area including the second area into the color-tone of the first area.
